**THIS BRAKE PAD IS SURE TO STOP OUR COMPETITORS
STRAIGHT IN THEIR TRACKS!**

Positive Plus™ semi-metallic brake pads
are the most versatile solution
on the market

STARTING
AT

Maximum stopping power and superior friction coefficient in every braking condition.

Unrivalled low-temperature performance (like those first few stops during our frigid Canadian winters) as well as in high-temperature situations (like stop-and-go traffic).

Quieter than competitive offerings thanks in part to superior-quality materials such as cashew resin and high graphite content.

Low compressibility for a firmer brake pedal feeling.

Metallic content provides high thermal threshold which reduces fading.

Superior heat dispersal at centre of braking system when coupled with drilled and slotted rotors.

Best choice for heavy-duty applications and towing for trucks and SUVs.
