

## :: PRESS RELEASE

| AN AUTO PARTS MANUFACTURER & DISTRIBUTOR LIKE NO OTHER

### **Transit launches its new generation of Bright Knights LED headlight bulbs**

**QUEBEC CITY, CANADA (AUGUST 3<sup>ST</sup>, 2022)** — Transit, the largest distributor of automotive parts and accessories in Eastern Canada, is introducing a new generation of Bright Knights LED headlight bulbs, a better performing and longer-lasting replacement for its older line.

With a more compact design and a 360-degree adjustable beam, these 4000-lumen LED bulbs fit most domestic and imported vehicles without the need for special tools, modifications, or external drivers. Plus, their fanless design makes them run quieter, more durable, and eliminates radio interferences, a common occurrence in models with fans.

Stephan Guay, President of Transit Inc., said, "We are introducing this new and improved line of headlight bulbs to allow our customers to offer the best technology to promote the transition from halogen to LED headlights. Our 13 product numbers are suitable for 99% of vehicles on the market, making them very easy to stock in store. This product comes with a key to adjust the harness and plugs directly into the vehicle's original socket. Each feature has been thought out to simplify handling as much as possible, both for our customers and for installers. »

Bright Knights LED headlight bulbs are available now at Transit. To learn more about this new product line, visit [transitinc.com/bright-knights-del-light-sets/](https://transitinc.com/bright-knights-del-light-sets/).
